NEW CLEANROOM PRODUCTION FOR LAMINATE TUBES

The ALLTUB Group has invested in a new Class 8 cleanroom for laminate tube production at our plant in Langenfeld, Germany. This investment forms a key part of the Alltub Group's strategy of strengthening our position and focus on the high-end and high complexity pharmaceutical market.

Our group has a long established reputation on the pharmaceutical market and has made continuous investments to create our niche market position.

This cleanroom investment, together with our recent investment in a small diameter laminate tube production line, creates Europe's only specialised laminate tube pharma production facility. Indeed, production is ISO 15378 GMP certified on all laminate tube lines at our Langenfeld plant.

The ALLTUB Group is continuously looking into improvements and new optimized manufacturing possibilities.

**About Alltub**

With six production plants located around the world (France, Germany, Italy, Czech Republic, Mexico), Alltub has more than 75 production lines manufacturing over 1.6 billion units per year (aluminum squeeze tubes, laminate squeeze tubes, aluminum caulking cartridges and aluminum aerosol cans). Alltub employs 1,400 people worldwide and generates over EUR 150 million of sales per year. For more information visit www.alltub.com
